Use ObbMountActivity

1. Press "**Mount**" button to mount the OBB file "**obbtest.obb**" under /sdcard folder

After mounting OBB file successfully, you can see informations about the OBB file.

2. Press "**Next File**" button continuously to view all files in the OBB file.
Files' informations are shown in "**File Name**" and "**File Content**" fields.

3. Press "**Unmount**" button to unmount the OBB file.

ObbMountActivity Codes

Source folder : [OBB-APK-Source](#)

This Android application is based on Android sample code :

AndroidSrc-Honeycomb-3.2/development/samples/Obb

.

It uses *StorageManager* to do OBB file mounting[*StorageManager.mountObb()*] and unmounting[*StorageManager.unmountObb()*] process.

It uses *android.content.res.ObbScanner.getObbInfo()* to retrieve OBB relative informations from an OBB file. This method returns an object of *android.content.res.ObbInfo* type.

This APK uses “**filename**” and “**packageName**” public fields of *android.content.res.ObbInfo*.

Once the OBB file is mounted, it will scan and store the name of all files in the OBB file. Each time the user press “**Next File**” button, it will read the content of the next file in the file list and show the content to the UI.
